

## **Awareness of Environment Level 3 - Lesson Plan**

Key Points to Cover:

1 – Balance of nature and the circles of life

Supplies Suggested:

Most boys get the water cycle of rain to river to lake to evaporate to rain.... This builds the circle principle. Start with this and then expand it to animals and insets and the circle of life for each and how they are in balance or can be balanced and how nature or God takes care of that balance.

Activities to Reinforce Lesson:

On your hikes you must have seen a tree that fell over and how this tree will provide the neutriets to support future growth in the area.
